

LITEDIMMER™ PRO

SERIES 3

LITEGEAR™

LITEDIMMER PRO SERIES 3

MUCH MORE THAN AN LED DIMMER

LiteDimmer Pro S3 dimmers are the perfect companion for controlling our LiteRibbon and LiteMat. This latest version has been designed from the ground up to offer the most advanced performance along with rock-solid reliability. Analog potentiometers offer the tactility needed to effortlessly make adjustments, even during the shot, and hideaway function lets you protect them while shooting or storage. Covered by our unconditional warranty, LiteDimmers include cinema-grade electronics that not only have smooth action but are flicker-free to camera even at some of the most extreme settings. The all new housing features an extruded case with cold-shoe slots down each side for flexible mounting options. The housing is capped by rubber bumpers offering protection for the unit as well as sensitive surfaces such as automobiles. Embedded magnets in the bumpers provide just enough attraction to steel to hold during driving shots or to your refrigerator.

Being introduced in Series 3 is the Remote Trigger port that allows for the use of Canon EOS Controllers for remote cueing. These 3rd-party remotes offer simple wired or wireless triggering of LiteDimmer Series 3 products.

LITEDIMMER PRO

SERIES 3

LITEGEAR®

LITEDIMMER PRO SINGLE

LiteDimmer Pro Single (Standard Capacity)

- ▶ Operates between 10 - 50VDC
